Education is a progressive
discovery of our own ignorance.

STATISTICAL METHOD

Definition of statistics: Statistics is the science of collecting, organizing, presenting, analyzing and interpreting the data gathered.

Importance of statistics: Statistics is a very important tool for the study of the social and economic life. It helps in the decision making and in the planning of the future.

Types of statistics: Statistics is divided into two main branches: Qualitative and Quantitative. Qualitative statistics deal with the attributes or qualities, while quantitative statistics deal with the numerical data.

Uses of statistics: Statistics is used in various fields such as business, economics, education, and social sciences. It helps in the analysis of the data and in the drawing of conclusions.

MCKINSEY APPROACH

- The McKinsey model, developed by leading management consultants McKinsey & Company, is a comprehensive approach to value-based management.
- This approach is based on the discounted cash flow principle, which is a direct measure of value creation.
- McKinsey Model of Value Based Management focuses on the identification of key value drivers at various levels of the organization, and places emphasis on these value drivers in all the areas, i.e. in setting up of targets, in the various management processes, in performance measurements, etc.

PETER'S ANOMALY

It is a general rule that the number of species in a genus is proportional to the number of genera in a phylum. This is known as Peter's Anomaly. The anomaly is named after the British paleontologist John Peter. The anomaly is observed in many groups of organisms, including plants, animals, and fungi. The anomaly is thought to be caused by the fact that the number of species in a genus is often much larger than the number of genera in a phylum. This is because many genera have a large number of species, while others have only a few. The anomaly is also observed in the fossil record, where the number of species in a genus is often much larger than the number of genera in a phylum.
