TO WHOM SO EVER IT MAY CONCERN

Green Audit is the most efficient way to identify the strength and weakness of environmentally sustainable practices in an organisation / Institution. It is a professional approach towards a rational and responsible way in utilising economic, financial, social and environmental resources. Green audits can “add value” to the management approaches being taken by the college and is a way of identifying, evaluating and managing known or unknown environmental risks, and scope for further continuous improvement, particularly in relation to waste, energy, water management and ecological conservation.

We would like to express our sincere gratitude for the support and cooperation extended while conducting the ‘Green Audit’ of MESIoM for the purpose of NAAC accreditation covering five years duration 2015-20. Following are the broad areas of scope of the green audit report coverage as well as recommendations for improvements.

- Campus Built-up, eco-friendly & barrier free Environment
- Greenery Landscape Environment
- Solid Waste Segregation and Management
- Water Quality and management* (based on 2017 audit report)
- Energy management* (based on 2017 audit report)
- Future Green Agenda and Plans

We commend MESIoM in recent years has taken cognisance of the environmental impacts of most of its actions and has made a concerted effort over the years to function in an environmentally responsible manner. Some of the practices are about a few years old, while others are new like the energy efficient LED bulbs, composting pits, inclusive washrooms, electric vehicle charging points, etc., and many others are in the pipeline. The college does perform fairly well when it comes to many environmental parameters.

The recommendations in the main Green Audit Report highlight many more ways in which the MESIoM should work to improve its actions and become a more sustainable institution.

Vittal Kumar A.

Sr. Environment Auditor
